

One Shot

REGENERATING HUMECTANT FOR CURATIVE APPLICATIONS AGAINST DRY SPOT & TURF FAIRY RINGS

BENEFITS

- **ONE SHOT** ensures homogeneous, uniform and deeper irrigation in irrigated land with all drip, pop-up, fertigation and sprinkler systems.
- Improves the efficacy of rainfall and irrigation, while increasing the uniform distribution of water in the rootzone.
- Preventive blend of hygroscopic humectant compounds attracts and condenses free water molecules from the air within the soil !
- Reduces water needs and irrigation frequency. Very cost effective, reducing: product quantity, irrigations, manpower and energy.
- Eliminate dry spot problems.
- Protect poorly irrigated areas.
- Improve seed germination.
- Enhance nutrient uptake.

TECHNICAL FEATURES:

Mixture of extracts, oils, amino acids and betaine, derived from plants.

Plant extracts.	83%
Vegetable amino acids. levog.	8%
Betaine	3%
Glycols	3%
Vegetable oils	3%

ONE SHOT is an innovative and technological soil humectant with regenerating properties largely derived from plant extracts and amino acids. Protects turf from harmful effects of drought stress. A single treatment can increase watering efficiency by managing root zone moisture throughout the day. It promotes and improves penetration, water retention and recovery from thermal stress, optimizes the horizontal and vertical distribution of water in soils with poor filtration capacity; cures dry spot and fairy ring formations, prevents root asphyxia phenomena due to drought or stagnation rot, totally biodegradable, it is not phytotoxic for plants and carpets grassy.

APPLICATION METHODS:

As soil water hydrating-infiltrating agent on football pitches, fairways, bunker edges: 8-10 lt. /ha in 1000 lt. of H₂O. Apply at 40 days intervals throughout the growing season. Irrigate thoroughly after application for 15-20 minutes.

PACKAGING: 5 liters drums
