

Barlancia

Dark green perennial rye grass with low biomass production characteristic

- Medium to high drought tolerance.
- Excellent wear tolerance.
- Dark green perennial ryegrass.

Barlancia has a dark leaf colour and is the right choice for use in dry and sunny areas. The variety will also easily germinate at higher soil temperatures. Barlancia distinguishes itself from other perennials by its low production of biomass and good tolerance to drought. As a top perennial for sports and recreation purposes, Barlancia naturally shows good results when it comes to wear tolerance and shoot recovery. In a mixture, Barlancia will guarantee fast establishment, a dense, wear-tolerant turf and a good drought tolerance.

Specifications

species	Lolium Perenne
Seeds per gram	700
Optimal pH range	5.8-7.4
Humidity	medium
Salt tolerance	medium to good
Maintenance required	medium
Rhizomes/stolons/tufted	tufted
Shade tolerance	low to medium
Water requirement	medium to high
Thatch build up	low

Lolium perenne

Throughout NZ, perennial ryegrass (Lolium perenne) is the grass of choice for permanent pastures. It establishes rapidly, yields well, tolerates a range of management practices and has a high nutritive value.

- Nordic climate
- Continental
- Atlantic climate
- Mediterranean

Characteristics

- Wear tolerance
★★★★★
- Speed of establishment
★★★★★
- Ornamental value (Fineness of leaves)
★★★★
- Self recovery capacity
★★★★
- Fast green up after winter
★★★★
- Colour darkness
★★★★★★
- Disease tolerance
★★★★
- Less irrigation required
★★★★★
- Less fertilizer required
★★★
- Less frequent mowing possible
★★★★
- Cool temperature germination
★★★★
- Winterhardiness
★★★
